PhotoBlend 3D is a comprehensive yet user-friendly software solution designed specifically for photo montages, for merging elements from several different pictures into a single image, using a large range of tools and functions to produce quality results. The program is very easy to install, requiring little experience in working with computers. You can then launch PhotoBlend 3D from the created desktop shortcut and begin working with your images, requiring several sources. However, the utility does require that you play around with it for a while, before you can learn how to use it to the fullest of its abilities. The interface of PhotoBlend 3D is fairly simple to understand, as it features a left-hand panel with the 'Composition' tools and a right-hand panel with the 'Source Images'. The 'Toolbar' comprises several functions which can be accessed with a simple click, like '3D Export', 'Add source' or 'Zoom'. For generating professional-looking results, PhotoBlend 3D makes use of 'Tolerant Masks' to extract objects from a source image, resorting to soft rather than sharp edges by means of a user-definable brush. The blending operations will remove any additional elements from the original picture, so they will not show up in your composition. Additionally, the 'Auto-Fitting Colors' function can automatically insert the new element into the background, making it appear less foreign and not seem as if it were just pasted on. You can 'Adjust Colors', namely 'Hue', 'Saturation', 'Brightness', 'Contrast' and 'Levels', as well as 'Flip Horizontal' or 'Flip Vertical', 'Bring To Front' or 'Send To Back' a certain element. You can also configure the 'Dynamic Blend Depth' for optimal results. To conclude, PhotoBlend 3D is an intuitive and efficient application which can help you deliver professional visual compositions and photo montages, with minimal effort, allowing you to generate original images from multiple sources.
