What's New in the?

UDI-Magic is a product of UDI International Inc. It is a desktop software that provides a means to transfer Excel data to Tally with minimal effort. Making use of the Universal Data Interchange (UDI) XML format, it facilitates data migration between an Excel spreadsheet and Tally.ERP 9. Tally is one of the world's leading ERP (enterprise resource planning) software providers. It is a multi-platform application, developed using C++ on top of Microsoft Windows. The images below can be used to understand how I have implemented a custom template using excel and imported XLS data to Tally. I have the following template on excel. I have another excel as a data source. When importing this data to Tally, instead of showing the existing templates, it shows the template from where i have created the data. Q: How to display the whole sentence after a search I am trying to show the whole sentence of the result after search. I tried to change the code as follows,but it isn't working. search.Text = "hello"; public MainWindow() { InitializeComponent(); string text = "hello"; text.Substring(0, Math.Min(text.Length, search.Text.Length)).Dump(); } A: Use search.Text.Length; instead of text.Length string text = "hello"; // get the whole length of the search text int textLength = search.Text.Length; // find the substring string searchText = "search"; // make sure we didn't exceed the length of the text if (searchText.Length

System Requirements For UDI-Magic:

Supported operating systems: Windows 7/8/10 64-bit Mac OS X (Mountain Lion 10.8.5+) Linux Minimum recommended system requirements: Minimum recommended system requirements: Windows 7/8/10 64-bit Mac OS X (Mountain Lion 10.8.5+) Linux Intel Pentium 4 CPU 2.0 GHz or faster
